

# **Mechanical and Production Engineering Association**

## **Interaction with Dr. Luigi Serio**

**(18<sup>th</sup> October 2016)**

On 18<sup>th</sup> October 2016 at 4pm the students from the Department of Mechanical Engineering got an enriching experience of interacting with an eminent scientist, Dr. Luigi Serio from the world famous, European Organization for Nuclear Research, CERN. CERN is an organization that operates the largest particle physics laboratory in the world located at Geneva, Switzerland. Although India is not an associate member of CERN, not many students are aware of CERN and its activities. Dr. Luigi Serio made the interaction very interesting. He spoke on the ongoing projects at CERN and mainly spoke on the world famous Higgs Boson particle or more commonly known as 'Gods particle', although, we often come across information on this particle, Dr. Luigi Serio explained with utmost interest on this topic.

The first fifteen minutes of the interaction, he spoke to us about what CERN is, their discoveries and what he mainly works on. Later, there was a Question and Answer session where Dr. Serio patiently answered all our question. At the end, students asked Dr. Serio whether there were any job or internship opportunities for students from our college. He gladly invited us to visit their organization in Geneva to experience something completely different. The interaction was enlightening and more interactions such as this in the future which will help TKM to form strong bonds with CERN.
